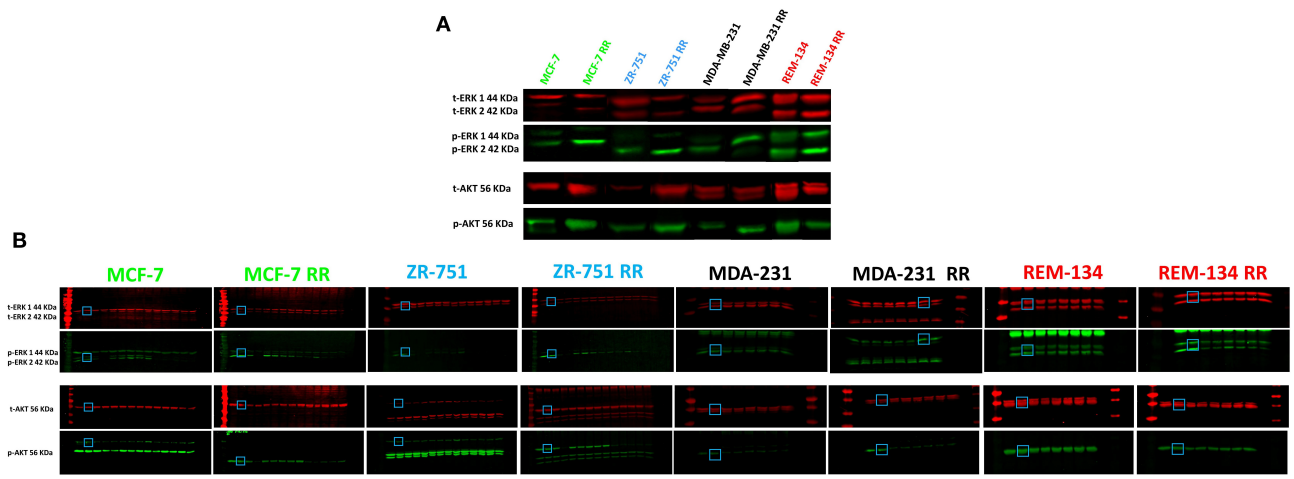
A Corrigendum on

Comparative Analysis of the Development of Acquired Radioresistance in Canine and Human Mammary Cancer Cell Lines

by Gray, M., Turnbull, A. K., Meehan, J., Martínez-Pérez, C., Kay, C., Pang, L. Y., et al. (2020). Front. Vet. Sci. 7:439.doi: 10.3389/fvets.2020.00439

In the original article, there was a mistake in the legend for figure 9C as published. Splicing was performed in the image to remove redundant lanes, but this was not originally stated in the figure legend. The band representing ZR-751 t-ERK had also been spliced in wrongly. This error has now been corrected. Figure 9C has now been moved to the supplementary figures and has been uploaded separately. The correct legend appears below.

The authors apologize for this error and state that this does not change the scientific conclusions of the article in any way. The original article has been updated.



Supplementary Figure 6 | (A) Combined western blot showing total and phosphorylated ERK1 and ERK2 and total and phosphorylated pan-AKT in parental and RR cell lines. Splicing was performed in the images shown in part (b) to remove redundant lanes to produce this figure. **(B)** Original western blot images from radiation time course experiments in all 8 cell lines. Bands shown in part (a) are highlighted here, which represent untreated control samples.
